

Overview

E&R Moffat Ltd offer a wide choice of Drawer units. All product ranges are manufactured predominately from stainless steel, and have a monocoque design structure or tubular framework.

Drawers.

Drawer units both heated and non heated types can accommodate a maximum static weight of 30kg per drawer displaced evenly inside.

Drawer slides

Drawers are fully extendible and have a positive lock in position, and side levers for disconnecting, this allows the complete drawer to be removed for easy deep cleaning and maintenance.

- Drawer slides are made from cold rolled zinc plated steel.
- Operating Temperature for non heated types: -17°C to 70°C
- Operating temperature for heated drawer units: -17°C to 120°C
- Full telescopic action
- Full extension drawer slide can be extended 100%.
- Side mounted
- Non-handed
- Hold-in de-tent, Drawer is firmly held in closed position, and released by pulling drawer open (also known as positive catch).
- Lever disconnect from the extended / open position the slide may be disconnected by depressing lever and pulling drawer out.
- Load capacity: 30kg.
